Springer Series in **SOLID-STATE SCIENCES**

Series Editors:

M. Cardona P. Fulde K. von Klitzing R. Merlin H.-J. Queisser H. Störmer

The Springer Series in Solid-State Sciences consists of fundamental scientific books prepared by leading researchers in the field. They strive to communicate, in a systematic and comprehensive way, the basic principles as well as new developments in theoretical and experimental solid-state physics.

- 126 **Physical Properties of Quasicrystals**
Editor: Z.M. Stadnik
- 127 **Positron Annihilation in Semiconductors**
Defect Studies
By R. Krause-Rehberg and H.S. Leipner
- 128 **Magneto-Optics**
Editors: S. Sugano and N. Kojima
- 129 **Computational Materials Science**
From Ab Initio to Monte Carlo Methods
By K. Ohno, K. Esfarjani, and Y. Kawazoe
- 130 **Contact, Adhesion and Rupture of Elastic Solids**
By D. Maugis
- 131 **Field Theories for Low-Dimensional Condensed Matter Systems**
Spin Systems and Strongly Correlated Electrons
By G. Morandi, P. Sodano, A. Tagliacozzo, and V. Tognetti

Series homepage – <http://www.springer.de/phys/books/sss/>

Volumes 1–125 are listed at the end of the book.

Preface to the Second Edition

This is a revised version of the first edition published in 1991. At the same time, this is a revised version of the Syokabo edition, which was written in Japanese and published in 1993 as a revised version of the original edition published in 1983.

Compared with the first edition, the following revisions have been made: a new chapter on electron–electron interaction has been prepared by a new co-author A. Fujimori. The substances in the previous Chap. 4 have been changed, and $\text{La}_{1-x}\text{Sr}_x\text{MnO}_3$ substituted for V_2O_3 , which has been extensively reviewed in *Reviews of Modern Physics*, Vol. 70, p. 1039 (1998) by M. Imada, A. Fujimori and Y. Tokura. Section 4.6, NiO, was rewritten by A. Fujimori. The other chapters have also been revised by each author to accommodate new developments which have appeared since the publication of the first edition.

As a result, the references have been increased from 1088 to 1293, and 83 figures are new or improved.

The authors are: N. Tsuda for Chaps. 1, 2 and Sects. 5.1–5.5 and 5.9, K. Nasu for Chap. 2, A. Fujimori for Chap. 3 and Sects. 5.6 and 5.7, and K. Siratori for Sect. 5.8.

The authors would like to express their gratitude to many authors and publishers for allowing them to reproduce their diagrams, and to H.K.V. Lotsch and C.E. Ascheron for their encouragement to complete this book. The authors are indebted to S. Lyle for having improved the English, and to Mrs. P. Treiber for her cooperation in the production process. Especially, they are indebted to Ms. A. Duhm for all her efforts to complete this book. Thanks are also to S. Makiya of Syokabo for his cooperation. Without their help, this book could not have been accomplished.

Finally, we acknowledge, with thanks, the authors of all the papers referred to in this book.

A. Fujimori, K. Siratori*

Preface to the First Edition

This book is a revised and up-dated translation of *Denki Dendōsei Sankabutsu* (Electronic Conduction in Oxides) published by Shokabo in Tokyo in 1983 as the second volume in the Material Science Series, which was edited for postgraduate students by T. Suzuki, S. Chikazumi, and S. Nakajima.

Since the publication of the first edition, we have witnessed the historic discovery of high- T_c superconductors by J.G. Bednorz and K.A. Müller. The Shokabo edition has thus been thoroughly revised to accommodate the recent developments, and K. Nasu joined as the fourth author.

The book is compiled as follows: After a short introductory chapter, Chap. 2, written by Tsuda, is devoted to a brief review of transport phenomena and electronic states in oxides. In Chap. 3, electron-phonon and electron-electron interaction are treated theoretically by Nasu and Yanase. Nasu discusses the present status of theoretical studies of the electron-phonon interaction in solids and Yanase explains the electron correlation. Chapter 4 treats the physics of various representative oxides in detail. Sections 4.1–4.5 and 4.10 were written by Tsuda and Sects. 4.6–4.9 by Siratori. This chapter is intended not as an exhaustive review of the properties of each oxide, but rather as an illustration of the concepts which have developed out of the research into transport phenomena in conductive oxides. Many of these concepts are due to N.F. Mott. At the end of Chap. 4, the properties of high- T_c oxides are reviewed by Tsuda. The reader is kindly asked to forgive the inevitable omission of certain important works in this field.

The authors would like to express their gratitude to H.K.V. Lotsch for his encouragement to complete this book and to A.M. Lahee for improving the manuscript. One of the authors (KS) is indebted to D. Ihle for his valuable comments on Sect. 4.8.

Finally, we acknowledge with thanks the authors of all the papers referred to in this book.

Tokyo, Okazaki
Sakai, Toyonaka, October 1990

Contents

1. Introduction	1
2. Introduction to Electronic States in Oxides and an Overview of Transport Properties	5
2.1 Atoms in a Ligand Field	5
2.2 Electronic Energy Bands	10
2.3 Electron–Electron Interaction	10
2.3.1 Direct Interaction	10
2.3.2 Indirect Interaction	11
2.4 Electron–Phonon Interaction	11
2.4.1 The Adiabatic Approximation	11
2.4.2 The Fröhlich Model, the Deformation Potential and the Simple Metal	12
2.4.3 Polarons	13
2.5 Randomness	15
2.5.1 Anderson Localization	15
2.5.2 Variable Range Hopping	15
2.6 The Seebeck Coefficient and Hall Mobility	16
2.7 Magnetic Susceptibility	17
2.8 Metal–Insulator Transition (MIT)	19
2.9 Good Conductors	38
2.9.1 The NaCl Structure	40
2.9.2 The Corundum Structure	44
2.9.3 The Rutile Structure	45
2.9.4 The Perovskite Structure	47
2.9.5 The K_2NiF_4 Structure	52
2.9.6 ReO_3 and $M_x\text{WO}_3$	52
2.9.7 Pyrochlores $A_2B_2\text{O}_{7-x}$	53
2.9.8 Spinels	54
2.9.9 Low-Dimensional Oxides	55

3. Theories for Many-Electron Systems with Strong Electron–Phonon and Interelectron Coulombic Interactions	57
3.1 Single-Body Problems	
in Strongly Coupled Electron–Phonon Systems	60
3.1.1 Electrons, Phonons and Their Couplings	60
3.1.2 Weak Coupling and Large Polarons	61
3.1.3 Strong Coupling, Self-Trapping, Broken Symmetry and Dimensionality	62
3.1.4 Dynamics of Self-Trapping	65
3.2 Two-Body Problems	
in Strongly Coupled Electron–Phonon Systems	67
3.2.1 Bipolarons	67
3.2.2 Charge Separation of Self-Trapped Exciton	69
3.3 Excitons and Solitons	
in One-Dimensional Charge Density Wave States	71
3.3.1 Phase Diagram of the Ground State	74
3.3.2 Nonlinear Lattice Relaxation and Proliferations of Excitons in One-Dimensional CDW	76
3.3.3 One-Dimensional Extended Peierls–Hubbard Model	78
3.3.4 Relaxation in One-Dimensional CDW	80
3.4 Direct and Indirect Excitons	
in Three-Dimensional CDW State	83
3.4.1 Three-Dimensional Extended Peierls–Hubbard Model for BaBiO ₃	85
3.4.2 Direct and Indirect Excitons	85
3.5 Competition Between Superconductivity and CDW State	87
3.5.1 The Many-Polaron System	88
3.5.2 Phase Diagram	90
3.6 Superconducting Transition Temperatures of Strongly Coupled Electron–Phonon Systems	94
3.6.1 Expected Behaviour of T_c	94
3.6.2 Interpolating Theory for T_c by CPA	95
3.7 Many-Electron System Coupling Strongly with Nonlinear Phonons	98
3.7.1 BCS Limit, Nonlinear Phonons and Isotope Effects	98
3.7.2 Anharmonic Peierls–Hubbard Model	100
3.7.3 Anharmonicity and Metal–Insulator (CDW, SDW) Transitions	101
3.7.4 Isotope Effects and Anharmonicity by the BCS Theory	104
3.7.5 Migdal–Eliashberg Theory	105
3.8 Non-Grassmann Path Integral Theory for Long-Range Coulomb Repulsion	107

3.8.1	Quadratic Form for Long-Range Coulomb Interaction .	108
3.8.2	Path-Integral for Both Short- and Long-Range Parts ..	109
3.8.3	One-Body Green's Function Free from Grassmann Algebra	110
3.8.4	Time-Dependent Bloch-De Dominicis Theorem	113
3.8.5	Light Absorption Spectrum of the SDW State.....	116
4.	Electron-Electron Interaction and Electron Correlation	119
4.1	Introduction	119
4.2	Microscopic Models of Interacting Electrons	120
4.3	One-Electron Theories and Electron Correlation	123
4.3.1	Hartree-Fock Approximation	124
4.3.2	Local Density Approximation	126
4.3.3	Electron Correlation Effects	126
4.4	Electronic Structure of Transition-Metal Ions	127
4.4.1	Hartree-Fock Scheme	127
4.4.2	Ligand-Field Theory	128
4.4.3	<i>d</i> Bands and Carrier Doping in Mott Insulators	131
4.5	Hybridization Between <i>d</i> and <i>p</i> Electrons	133
4.5.1	Mott-Hubbard Type and Charge-Transfer Type	133
4.5.2	Configuration-Interaction Theory	136
4.6	Magnetic Interactions	140
4.6.1	Superexchange Interaction	140
4.6.2	Local Moment in Metals	142
4.7	Correlated Metals	144
4.7.1	Metal-Insulator Transition	144
4.7.2	Hubbard Model	145
4.7.3	Fermi-Liquid Properties	146
4.7.4	Long-Range Coulomb Interaction	150
4.7.5	Mixed Valence States	151
4.7.6	Anderson Localization	152
5.	Representative Conducting Oxides	157
5.1	ReO ₃ : The Most Conductive <i>de</i> Conductor	158
5.1.1	Crystal Structure	158
5.1.2	Electronic Properties	160
5.2	SnO ₂ and TiO ₂ : Oxide Semiconductors	168
